ENVIRONMENTAL POLICY

For more than 50 years, SEPAM has been providing mechanical machining services for aluminium components for the automotive and industrial sectors. The machined parts are the result of die-casting, gravity casting and forging. We supply finished parts to the most important companies in the sector worldwide.

The policy of SEPAM S.R.L. is based on the principles of protecting the environment and prioritising sustainable development. Our policy is therefore aimed at guaranteeing that, in the carrying out of all our activities, natural resources are guaranteed and protected in respect for current laws and international standards that the company has decided to take on board.

The environmental management system pursuant to the UNI EN ISO 14001 regulation implemented by the company SEPAM is applied to the activities of:

- *Manufacturing of aluminium components by machining operations*

including main activities carried out by third parties according to level of influence, in order to improve environmental performance, satisfy obligations of conformity and reach objectives.

In the carrying out of its activities, SEPAM S.R.L. undertakes to:

- communicate its policy to interested parties, with the aim of open dialogue;
- promote employee responsibility at all levels with regards to environmental protection by setting up personnel information and training programmes;
- ensure cooperation with public authorities, category associations and all other institutional and social interlocutors to promote a focus of attention on the environment and to develop the use of the best possible forms of technology available and knowledge of the field;
- evaluate in advance the environmental impact of new processes and modification of existing systems;
- improve the management of waste produced, with a particular focus on hazardous waste;
- adopt measures necessary for reducing the environmental impact of emergency situations;
- evaluate improvement plans to counteract the climate change;
- focus particular attention on the management of hazardous substances purchased and used;
- guarantee commitment to preventing pollution, favouring the use and the implementation of technology to reduce emissions into the air and water, with the optimising of resources and energy consumption;
- seek suppliers of goods and services who share the principles of environmental protection in terms of both intent and implemented behaviour, developing stable relationships of collaboration that are reciprocally beneficial;
- guarantee continuous improvement, the prevention of pollution and respect for applicable laws and other measures that the organisation adopts with regards to its own environmental aspects, promoting technological innovation.
